

BOOKEE (NFT Book store)

The best way to sell your books and earn rewards as you
read

Introduction

Web3 and Blockchain is bringing with us brilliant technologies we can work with to improve a lot in our surroundings one of which is Non-fungible tokens (NFTs).

Bokee is built on ethereum and utilizes the capabilities of the ERC-721 (NFTs) to manage the ownership of books.

Problem statement

How might we increase the profit to the authors while protecting the ownership of their writings as the carrier embraces digital advancements.

Proposed solution

Solution is to create Bookee the platform that list and sell books as NFTs to readers. Bookee provide authors with the chance to collect revenue on the selling and reselling of the copies after being.

Use cases

Can be used with publishing companies to release some book editions as NFTs

Be used in the web3 adoption campaign as people will be motivated with "paid as you read"
